AWS Jam Overview

AWS Jam is a gamified learning event to build your practical understanding of AWS services and best practices.

▷ GAMEPLAY

Individuals or teams compete to solve a series of technical challenges in a lab-based cloud infrastructure. Clues are available to help you navigate the challenges, but every time you use a clue, points are deducted from your score! A live leaderboard provides updates on your team's scores, stats, and progress during an event.

▷ CHALLENGES

The challenges cover different technologies and use cases such as security, DevOps, data analytics, machine learning, internet of things, migration, and more. New challenges are constantly being released to reflect the latest AWS innovations and best practices.

Based on your organization's target learning goals, the most relevant set of challenges are included in each AWS Jam event.

We can't wait for you to experience an AWS Jam event soon...
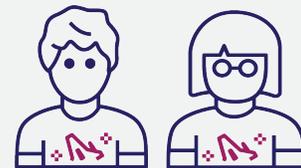

Who is AWS Jam for?

An AWS Jam can be tailored to suit different technical skill levels, from novice to seasoned professional.

The challenges have varying degrees of difficulty: easy, medium, and hard.

You can team up with colleagues from diverse roles, such as Developers, Architects, and Security Specialists, to find the most optimal solutions.
